Smart Value PowerEdge R740 Server

(Found at https://www.dell.com/en-ie/shop/dell-poweredge-servers/poweredge-r740-rack-server/spd/poweredge-r740/per7401)

Notes:

- 4 Additional Network Ports added for all relative VLANS
- Power Rails A and B for Power Redundancy
- Ports for VLANs 2, 5, 6, 9, 10, and 12. Two more for Tagged Traffic.
- For cost Preferences one server can run the full domain but the advice would be to have multiple servers similar to this setup but take unrelated ports out (i.e Network Controller Could be put on another Server if this is a storage server so the Corresponding port could be removed from other servers.

All network cables are 3m in Length and C13-C14 Power leads (One Black and One Grey) are 2m in length.

Network equipment is out of scope
